

# Airplane Experiments

Want to keep experimenting with airplanes after camp? Look at the steps below to keep experimenting and crafting!

## 1. Try Folding Airplanes of Your Own!

In your camp kit, you will find plain paper and instructions on how to fold different kinds of airplanes. Try folding them on your own and see how well they fly!

## 2. Improve your Airplanes

In your camp kit, you will have various items that might make your airplane traveler farther. Try doing the following things to see if they help your plane, or make it worse!

- Try using tape of different parts of your airplane.
- Try changing the wings of your airplane by bending them in different directions.
- Try adding small slits in your airplane wings.
- You can also use things you have around your house. For example, if you have paper clips that see what happens when you add paper clips to different parts of the paper airplane.

## 3. Decorate your Airplane!

Using the supplies in your camp kit or things you have at home, decorate your airplane so it looks fancy as it flies!
