

Draw an Insect

According to scientists, there are more insects in the world than any other species. Although many people find them creepy and ugly, they are really important. They are the only food source for many amphibians, reptiles, birds and mammals. So if you love other kinds of animals, you have to appreciate insects. These tiny creatures have six legs, two antennae and three parts to their bodies. Use the supplies in your kit to examine and draw an insect of your choice.

Materials

- Bug viewer
- Pencil
- Journal

Instructions

- Go outside and find an insect.
- Carefully place the insect inside your viewer.
- Look into the viewer and observe the insect.
- Then, using your pencil and your journal, draw a picture of your insect.
- Once your picture is complete, carefully release the insect from the viewer and back into nature.
