

Nature Walk Bracelet

Although many kids could not go on vacation because of gas and rubber (tire) shortages, many parents felt it was important for kids to spend time outside. Molly went to a summer camp where they slept in tents and played in the water and in the woods. Try getting outside for a nature walk and make a cool bracelet as you go.

Materials:

- **Duct tape or masking tape** (it should be wide enough to be a bracelet)

Instructions:

1. Make the tape into a bracelet that will fit loosely around your wrist. **Make sure that the sticky side is facing out!** *Note: You don't want it too loose that it will fall off, but also not too tight that it hurts your wrist.*
2. As you walk through nature, find plants that you think are pretty or interesting. When you find something, stick it to the tape on your wrist.
3. Try to fill in as much of the tape as possible to make a full bracelet.
